

House Price Analysis Using Tableau Data Preprocessing & Business Questions

Dataset Description:

The housing dataset contains information about residential properties, including house prices, number of bedrooms, bathrooms, floors, renovation status, house age, and other attributes. The dataset is used to analyze housing market trends through Tableau dashboards.

Data Preprocessing Steps:

- Imported the CSV dataset into Tableau.
- Verified column names and data types.
- Removed duplicate records (if any).
- Checked for missing values.
- Converted fields into appropriate data types.
- Organized the dataset for visualization.
- Created worksheets for analysis.

Business Questions:

- What factors influence house prices?
- How does renovation affect house prices?
- How does house age impact property value?
- How do bedrooms and bathrooms influence pricing?
- What are the sales trends over the years?
